

Version: 4.07.150

10 2022

Impact is an online application that supports the workshops with information about Parts, Components, Standard parts, Service, Standard times and Tools. It is used by the brands within the Volvo Group.

Release News gives you an overview of new features and changes to the latest version of Impact. Take the time to carefully read this information as it helps you gain the full benefit of the application. For more information about functions and dialogs in Impact, see Impact Help within the application.

What's New in Impact

The following topics describe changes in this release of the Impact application:

Copy to Clipboard on Mobile Devices

The standard 'Copy to Clipboard' function should now work as expected when using Impact on mobile iOS and Android devices using Chrome, Safari and Samsung Internet browsers.

Class 4 Tools Search

When performing a search in the **Tools** tab, it is now possible to select **Class 4** tools as an **Additional search value**.

Class 4 tools represent all tools that do not correspond to Class 1, 2 or 3.

Confirmation Required For Note Deletion

Previously, it was possible to delete user added Notes without having to provide a confirmation. Now the user will need to confirm their choice to delete a note.

The screenshot shows a search interface with the following elements:

- Search header with a refresh icon.
- Input fields: 'A' (value: A), 'VIN' (value: 595959), 'Model' (dropdown), and '5. Brakes' (dropdown with a search icon).
- 'Info type' dropdown set to 'All tools'.
- 'Clear' and 'Search' buttons.
- 'Additional search values' dropdown.
- 'Search by:' dropdown set to 'Class'.
- A list of class options: 1, 2, 3, 4. Option '3' is selected and highlighted in blue.

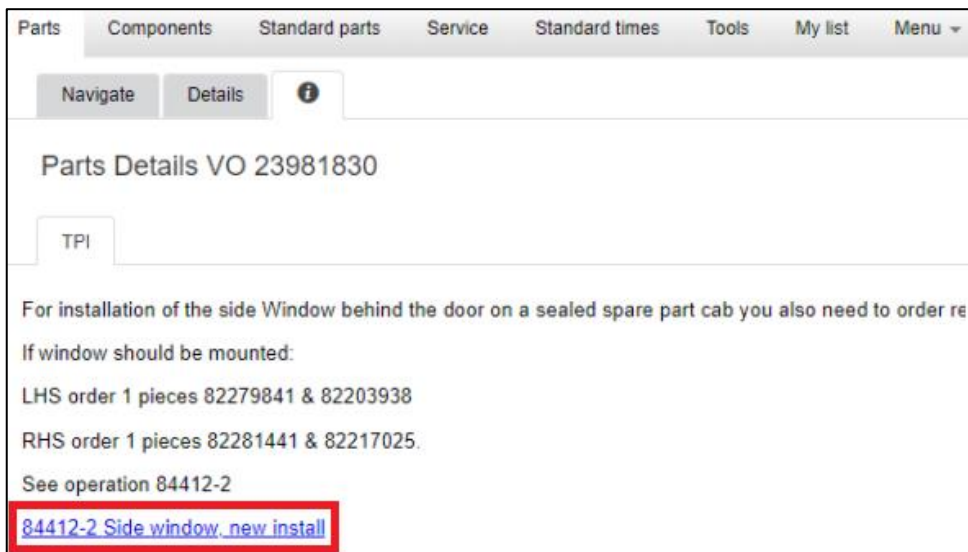

General Corrections in this Release

The information provided here describes core corrections that affect all Impact Business Areas or Truck Divisions.

TPI Links and Content Fixes

There are two fixes related to Technical Parts Information (TPI). First, some broken hyperlinks were found after a **Parts** search. Second, when the TPI tab was accessed after a **Standard Parts** search, the tab would sometimes not display any content. To address these issues, the method used to open a link has now been updated, so these issues and similar issues should now be corrected.

Lost Search Results After Viewing Details

A correction has been made so that after performing a chassis unique Parts search, results should no longer be lost when navigating up and down through details, content and back to results.

Clear Function Fix

Retention of search criteria across different tabs is useful. It is also convenient to be able to clear that criteria quickly. Therefore, when clicking the **Clear** button in the Navigate panel on the **Parts**, **Components**, **Service**, **Standard Times** or **Tools** tab, any entered search criteria will be cleared from the Navigate panels in these tabs.

Clicking the **Clear** button in the **Standard Parts** tab, Navigate panel will only clear search criteria in that tab.

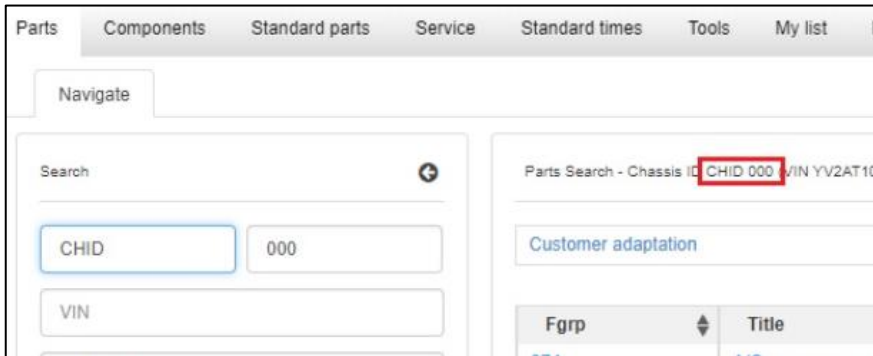

Part Status Display on the Exchange Parts Tab

The Parts Status (PS) column will now show a status for Exchange parts if status information is available.

Header Fixes Across Tabs

Mis-matched search result headers should now display the correct Chassis ID (CHID). Headers should only change after a search has been executed.

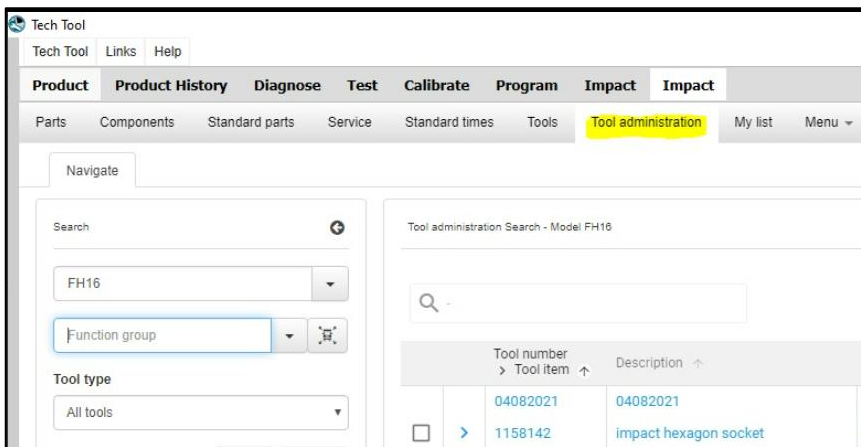

Tools Search Keeps Brand Criteria from Parts Search

Previously, after performing a Parts search that included a Brand selection as part of the criteria, the Brand was carried over to the Tools tab. This should no longer happen.

Tool Administration Visibility from Techtool

Users with access to Tools administration can now see the **Tools administration** tab when accessing Impact via Tech Tool.

Vehicle Explorer Search Button Fix: (Renault)

In the Vehicle Explorer, after clicking a Part and then on the Generic link, the Search button would be highlighted green. After clicking the search button, an error message would be shown. This should no longer occur.

Save and Send to Basket Error: (Renault)

An error was occurring when trying to save and send to the Basket. The problem occurred when including Customer Adaption parts. This should now function as expected.
