

Volvo Buses. Driving quality of life

VOLVO BUS VEHICLE STATUS

A part of Volvo Bus Services

How is your vehicle doing right now?

Vehicle Status gives the answer. On demand, in real-time, at the garage or on the road.

Vehicle Status

The real-time information about your vehicle's health makes it simple to avoid unplanned stops and subsequent downtime costs. The Vehicle Status gives a comprehensive overview of several selected parameters of your vehicle.

How does it work?

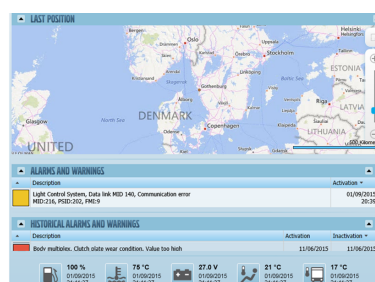

When an alert or warning is displayed on the driver dashboard, the vehicle sends this information to the off-board system. The information displays historical alerts and warnings, when a malfunction happened and when a component was deactivated. The information is instantly distributed to the Operator or Traffic Control. Vehicle Status also present the position of the vehicle to support an off-board decision and communication with the driver. This will help to speed up and improve decision making by supporting the driver with what action to take.

Availability

The availability of Volvo Bus Vehicle Status is currently limited to selected bus models and markets.

Adapted to customer type

There is basically the same need for different customer segments. Same source of information will be used but the use interface will be optimised pending on customers operation and process.

Personal integrity

For the protection of personal integrity, personal data regulations may restrict the follow-up of individual drivers, or collection of vehicle events or positions.
