

# CLEAN & CARE PROGRAM

Stay safe in times of Covid-19

Our focus on protecting and caring for people has made Volvo Buses a leader in safety. Now we are taking one step further. People across the globe have witnessed the various effects of Covid-19, both in their private lives and at work. During times of uncertainty, it is more important than ever to do what we can to make a real difference. We are working in real time to keep our employees and passengers safe, limit the impact on society, support our customers and protect our business.

## Protecting what's important

We at Volvo Buses are here for you to ensure that your coach is clean and safe for passengers and drivers alike. Here are some of our recommendations and our ongoing initiatives.

### General maintenance recommendations:

- Always follow the advice of your National Healthcare System in every respect.

- Clean both the defroster and air recirculation filters every day.
- Use disinfecting fluid to clean handrails and all surfaces that may be touched by hands, repeating frequently during the day.
- At the end of the working day, sanitise the entire passenger area, for example with the Ozone Generator, in the Clean & Care Program on the following page.

## Equip your coach with the Clean & Care Program

To increase the safety of coach travel in light of the recent Covid-19 pandemic, we offer health and safety products for all our coaches, both old and new models. Contact your Volvo representative for more information.

### Continuous disinfection – ECO3

The ECO3 disinfecter is one of the most effective ways to proactively work against bacteria and virus. This device continuously produces ozone gas that cleans the air and reduces particles and organic substances on all surfaces with which it comes into contact, resulting in widespread disinfection of the bus interior.

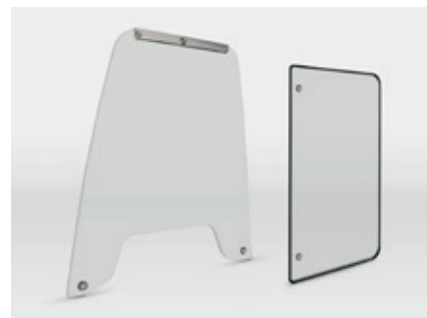

- Retrofit kit is available
- The ECO3 disinfecter has been tested and validated by the independent SGS agency

### Driver separation

To reduce contact with passengers and minimise the risk of virus transmission, these partitions are a good choice for making the driver's environment safer. Choose both or only side or rear partition.

- Retrofit kit is available
- Transparent and clear view, easy-to-clean materials
- Materials according to ECE 43 standards

### Disinfecting fluid dispensers

Make it easy for drivers and passengers to maintain good hand hygiene and increase the cleanliness of the entire bus. Easy access for people who enter or exit the coach, or who use the lavatory.

- Retrofit kit is available
- Refillable and works with any type of sanitiser
- Available as manual or automatic model

### Disinfecting box – Ozone Generator

Start the day or a new trip with a sanitised vehicle by using the Ozone Generator, a disinfection device that performs complete disinfection of the vehicle. This method requires an empty vehicle during cleaning and 20 minutes afterwards, making it a good cleaning choice during the lunch break or at the end of the working day.

- To be activated daily for 20 minutes
- Needs a 230 V power supply
- Easy to transport: 29×15×23 cm
- Lightweight: 3 kg
